

Micronized Rubber Powder (MRP)

Presentation by
www.primaryinfo.com

About Micronized Rubber Powder (MRP)

MRP is made typically from vulcanized elastomeric material, mostly from end-of-life tire material, but can also be produced from post-industrial Nitrile rubber, EPDM, butyl & natural rubber compounds.

Data Base compilation

The image shows a Windows desktop with a web browser open to the website www.primaryinfo.com/projects/micronized-rubber-powder.htm. The browser has three tabs open, all titled "Micronized Rubber Powder (MRP)". The page content is displayed in two overlapping windows. The top window shows the main header and navigation links, while the bottom window shows detailed content sections.

MRP into various products include tire, automotive, construction, industrial components and also used as an additive in plastics, asphalt, coatings and as compound extender.

- Production plant of MRP need to be equipped with 5 to 6 cryogenic turbo mills that produce rubber powders at rates exceeding 3000 pounds per hour which results in 140MM Ibs annual capacity per year.

Equipment Suppliers

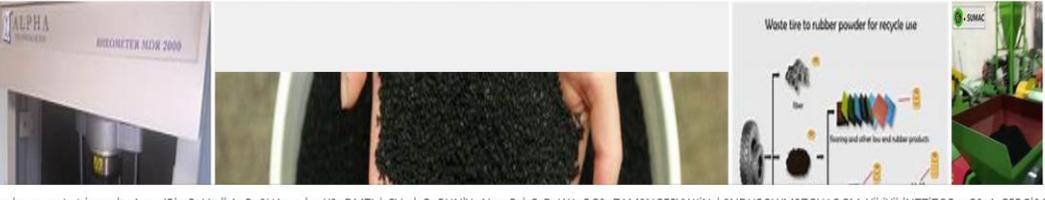

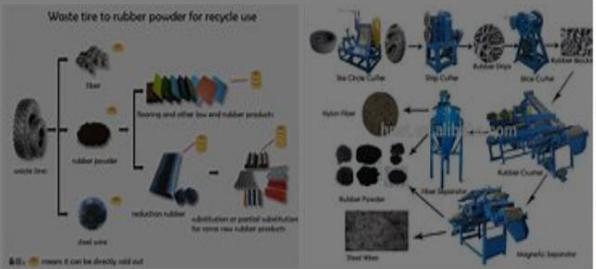

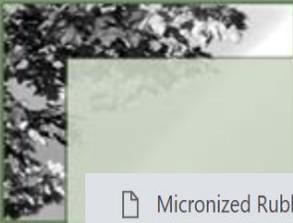

- Supplier1 from China.
- Supplier2 from China.
- Supplier3 from China.
- Supplier from Taiwan.

Report & Uses

- Evaluation of MRP with cost/performance benefits.
- Tyre & rubber recycling.
- Micronized Rubber Powder Analysis.
- Researchers help advance manufacturing.
- Use of MRP made from end of life tire material.

Micronized rubber powder is a sustainable raw material produced from end of life tires. It has many uses and is often combined with binders to create quality post-consumer products. The benefits of MRP include added flexibility and strength for parts, while being cost effective and environmentally responsible.

HOW OUR CUSTOMERS ARE USING MICRONIZED RUBBER POWDER:

- New tire manufacturing
- Compounding
- Injection Molding
- Extrusion
